

IMMERSA-DOME®

Personal Multisensory System
for Complete Immersion.

Hemispherical Display

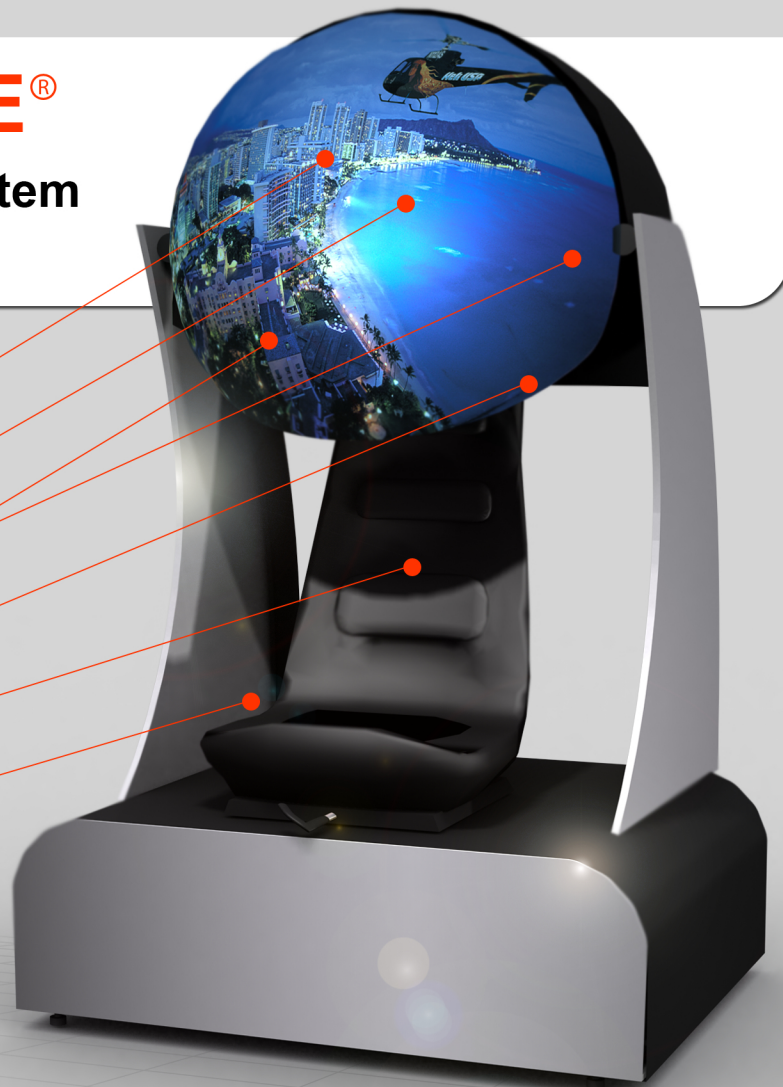

CGI / HD Video

Stereo Sound

Time-Triggered Scents

Vibration

Wind Simulation

IMMERSA-DOME

The Immersa-Dome provides an amazing immersive experience. The system's unique display is a hemisphere that completely fills the user's front and peripheral view.

The Immersa-Dome is capable of very high-resolution and is only limited by the content and projector resolution. The projected image can be seen on both sides of the hemispherical dome so the operator can see what the user is viewing. Waiting participants will be fascinated by the visual spectacle as they anxiously wait for their opportunity to be personally immersed.

With the Immersa-Dome, throughput is fast and easy without the hassle of operator maintenance and potential hygiene concerns. Unlike headset-based Virtual Reality systems, the Immersa-Dome does not touch the user's head, face, or hair.

The Immersa-Dome is patented technology offered exclusively by Aardvark Applications. The complete system features vibration in the seat, time-triggered scents and wind simulation, cool or warm air is optional. Stereo surround sound completes the multi-sensory experience.

Content can be CGI (computer-generated imagery) or HD (high-definition) video geometrically corrected for the dome. The Immersa-Dome can also be equipped with a hand-held controller for navigation within an experience.
